

Abstract

~~The invention relates to a~~ A portable, foldable electronic device (1) ~~comprising~~ has an opened use position and a closed use position, and a hinge mechanism (36) ~~for the same~~. The device ~~comprises~~ is constructed with at least a first housing part (6) ~~comprising with~~ at least an inner wall (62), a second housing part (9) ~~comprising with~~ at least an inner wall (92), a hinge mechanism (36) is arranged to fold the first and second housing parts (6, 9) ~~in relation~~ relative to each other for a first use position ~~in the closed position~~, wherein the inner walls (62, 92) are placed against each other, remaining between the housing parts (6, 9), and for a second use position ~~in the opened position~~, wherein the inner walls (62, 92) and simultaneously the housing parts (6, 9) are placed adjacent to each other, ~~and wherein the device (1) can also be used on the side of the inner walls (62, 92)~~. The device (1) ~~also comprises~~ has a third housing part (2), to which the first and the second housing parts (6, 9) are attached by means of ~~said the~~ hinge mechanism (36) ~~in such a way that they are simultaneously folded in relation to the third housing part (2) as well, when the device (1) is opened and closed~~.

~~(Fig. 3)~~
